

Fisher and Paykel Evora Nasal Mask

Fisher and Paykel Healthcare describe this as simply CapFit with the first mask with CapFit headgear. Unlike any other mask, F&P Evora™ incorporates CapFit headgear that has been designed to be put on like a cap - a simple and intuitive movement that patients are familiar with. It is as easy as putting on a cap and can be performed with one hand.

The headgear is only one size which can be adjusted to the head size. It is made of a soft-knit fabric which has AirEdges to avoid leaving marks on the face.

The silicon seal is the next generation of Dynamic Support. It has a Soft, compact floating seal that sits comfortably under the nose to create an unobtrusive seal. The wings at the side help to create a perfect seal for all.

The exhalation port on this mask has Radial air-flow which is created by laser-drilled exhaust holes designed to minimize draft and noise.

Fisher and Paykel internal studies showed that 95% of respiratory therapists found it easy to fit. The study also showed that 98% of patients found it easy to put on and take off in the dark. This is a big plus with CPAP therapy and interruptions in the night.

This mask comes in four sizes small, medium, large and wide.
